SAE Institute is the world’s largest entertainment technology institute with more than 35 years’ experience as the world leader in audio, film, games development and 3D animation training. There is even an approved higher education degree campus right here in Perth.

Students who historically entered university are now looking beyond the old standard styles of higher education and seeking qualifications from institutions that offer specialised, industry-focused education with real career outcomes.

“We pride ourselves in knowing SAE students are learning from the best in the business and we are setting the platform to launch our students’ careers in their respective industries,” SAE Perth Campus Manager Dean Pearson said.

“Not only are SAE bachelor degrees internationally recognised, but students have access to industry level standard and instruction not only from professional educators but also from current industry professionals.”

Mr Pearson said if you wished to break into the creative industries you needed a strong qualification.

The growth of the Australian entertainment and creative media industries has meant an increase in demand for highly qualified and knowledgeable professionals, and the opportunity to enter these exciting industries continues to expand.

Mr Pearson’s comments are vindicated by the past success of the institute’s graduates. Over the years SAE has produced graduates who have gone on to win Oscars, Grammys, and ARIA, AFI and WAMi (West Australian Music Industry) awards, to name just a few.

Students have the option of studying an accelerated two-year degree in Audio, Film, Games Development or 3D Animation.

The courses are FEE Help approved and the accelerated programs enable graduates to get into the industry faster and commence their career one year earlier than normal.

SAE’s Bachelor of Audio will arm students with the technical and creative aspects of recording, as well as all aspects of audio production, live sound techniques, mixing, mastering, music production, music business and studio acoustics.

SAE’s Bachelor of Film covers all areas, such as concept development, screen writing, camera operation, production management, directing and editing, skills as directors, producers and editors.

SAE’s Bachelor of Games Development will prepare students for the vastly growing industry.

They will learn everything from design concept right through to the finished product using software compatible with almost all games platforms (consoles, PC, phones, tablets, and even Macs).

SAE’s Bachelor of Animation focuses on 3D primarily and will open you up to a whole new world.

Students cover a range of skill such as modelling, visual effects, character design, environmental modelling, game assets, concept art, architectural visualisation and more.

If your dream career is obtaining a degree and producing music for an international act or working on a film set, it no longer needs to be a dream. SAE Institute is now taking enrollments for the June trimester.

“SAE degrees enjoy international recognition and industry acceptance,” Mr Pearson said. “It is the perfect way to start the career you’ve always dreamed of.”
